

Faster Processing

▼ In-Field Processing – Globe Claritas™: Fast and Portable

Our laptop-based processing option allows us to work alongside the crews to process data in the field in real time. Fully migrated results can be viewed, data QC'd and adjustments made to optimise acquisition. Our portable processing systems are perfect for collaborating with the client in their office.

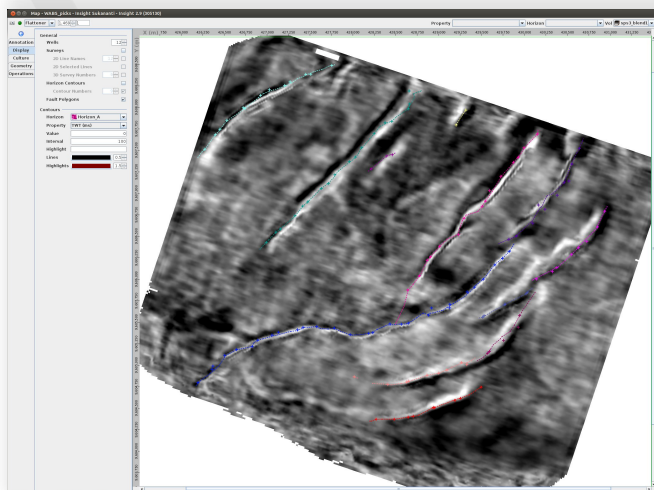

▼ Fast Turnaround – when deadlines matter

Our RPM™ migration kernel runs 20 – 40 times faster than Kirchhoff. This means where timing is critical your complete results can be available in less time. Up to 50% sooner than normal. And when you consider that we can often get started right away and have access to the NZ Super Computer service and Amazon EC2 cloud, you can see why AusGeos are breaking the processing speed limits.

▼ Improving Results

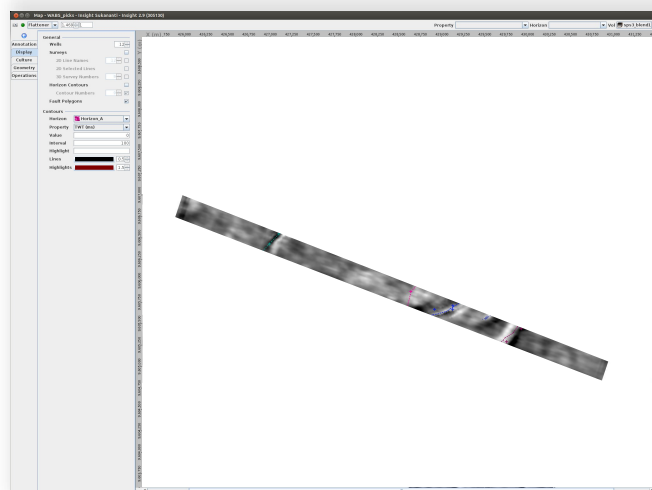

Superior results require testing many parameters right through to final result. You can't cut corners with a cookie-cutter approach. With RPM™ our fast processing fully tests many parameters, allows us to check the final result and cycle back. The iterative process finds the optimal solution, without the time and costs penalty.
